

Interesting Non-Warburton DNA Results

FTDNA Code	Earliest Ancestor	Location of Participant	DYS393	DYS390	DYS19	DYS391	DYS385a	DYS385b	DYS426	DYS388	DYS439	DYS389i	DYS392	DYS389ii	DYS458	DYS459a	DYS459b	DYS455	DYS454	DYS447	DYS437	DYS448	DYS449	
			Panel 1												Panel 2									
This profile is from Ancestry, surname Warbritton, which suggests Warbritton is derived from Warburton. There is a family story the name was changed during the American War of Independence.																								
Warbritton	USA	USA	13	24	14	11	11	14	12	12	12	13	13	30	15	9	10	11	11	25	14	19	30	
The following are other interesting chromosomes. They are not participants in the DNA Project but have been obtained from other sources.																								
This Mongan profile is from a probable descendant of the brother of Charles Mongan Warburton, Bishop of Cloyne, and so might be the profile of the Mongan Clan..																								
Mongan	Ireland, late 18th century	Australia	13	26	14	10	11	13	12	12	12	13	14	29	17	9	10	11	11	25	15	18	30	
This group are non-Warburtons with a close match to Group 01. They may be entirely random matches, but also they may result from the illegitimate sons of Warburtons, as yet not found.																								
Hunter	Lancashire, 1861	USA	13	24	14	11	11	14	12	12	12	13	13	29	17	9	10	11	11	25	14	19	30	
Brunton		North Carolina	13	24	14	11	11	14	12	12	12	13	13	29	17	10	10	11	11	25	14	19	29	
Edwards		California	13	24	14	11	11	14	12	12	12	13	13	29	17	9	10	11	11	25	14	19	30	
It is only a family legend that the following is a Warburton chromosome, and confirmation is needed through a genetic match. It clearly does not match the above la1 Warburton.																								
Jordan	Liverpool, 1855	California	13	22	15	10	13	14	11	14	11	13	11	29	16	9	9	8	11	23	16	20	27	
Red background indicates a difference from the first profile of that group.
